

Amendments to the Specification

Please replace paragraph [0016] with the following amended paragraph:

[0016] Example 1:

The user, over a user interface such as, for example, a keyboard, enters the address ~~http://www.info.com/~~ www.info.com of the WWW-server 5 (data-preparing device) into the WWW-browser, to request the information data belonging to this address from the server 5. The WWW-browser establishes a connection to the WWW-server 5, and communicates to the WWW-server by which address information data are requested.

Please replace paragraph [0018] with the following amended paragraph:

[0018] The WWW-server 5 reports/communicates the address and capabilities of the utilization device 6. The utilization device 6 requests from the information data bank 7 the information data belonging to the address ~~http://www.info.com/~~ www.info.com and formats these in correspondence to the capabilities of the end terminal 1. Since the end terminal 1 can represent only text, the application device generates only textual information in black-and-white representation. Graphics are not generated or cannot be read from the information data bank. The application device 6 delivers the data to the server 5 which sends these to the WWW-browser in 1. The WWW-browser interprets the formatting and makes the information data available in the display of the end terminal 1.
